

Day 5

→ mixed reference

multiply all column data to Row data like

1	2	3	4
2	2x2	2x3	2x4
3	2x3	-	-
4	2x4	-	-

- for this to execute the function we need to lock the common row/ column for that particular cell

→ Excel - mathematical functions

1. Round

Rounds a number to the specified number of digits

Syntax :- $\text{=ROUND}(\text{number}, \text{num-digits})$

Example :- $\text{=ROUND}(4.8319, 0) \rightarrow 5$

2. Round of 2 decimal points

Syntax :- $\text{=ROUND}(\text{number}, \text{num-digits})$

Example :- $\text{=ROUND}(4.8319, 2) \rightarrow 4.83$

3. ROUNDUP

Always rounds a number up.

Syntax: $=\text{ROUNDUP}(\text{number}, \text{num-digits})$

Example: $=\text{ROUNDUP}(4.8319, 0) \rightarrow 5$

4. ROUNDDOWN

Always rounds a number down.

Syntax: $=\text{ROUNDDOWN}(\text{number}, \text{number-digits})$

Example: $=\text{ROUNDDOWN}(4.8319, 0) \rightarrow 4$

5. EXPONENT

Raises a number to a given power.

Syntax: $=\text{G} \wedge \text{H} \wedge$

Example: $= 4 \wedge 2 \rightarrow 16$

6. ROMAN

Converts a number into Roman numerals

Syntax: $=\text{ROMAN}(\text{number})$

Example: $=\text{ROMAN}(10) \rightarrow X$

7. ARABIC

Converts Roman numerals into Arabic numbers

Syntax: $=\text{ARABIC}(\text{"x"})$ (text)

Example: $=\text{ARABIC}(\text{"x"}) \rightarrow 10$

8 REPT

Repeats text a specified number of times

Syntax: =REPT(text, number-times)

Example: =REPT(4, 5) → 44444

- repeat the data same no of times
= REPT(4, 4) → 4444

- using * in place of text
= REPT(\$*\$1, 4) → ****

9 SQRT

Finds the square root of a number

Syntax: =SQRT(number)

Example: =SQRT(16) → 4

→ Convert data to negative
= 16 * -1

10 ABS

Returns the Absolute value of a number removing the negative sign

Syntax: =ABS(number)

Example: =ABS(-25) → 25
